Subject: Digital Footprint

Introduction

This project integrates **Google Analytics**, **Looker Studio**, and a **WordPress-hosted website** to create a powerful platform for tracking, analyzing, and visualizing website performance. The WordPress site serves as the front end, where user interactions are monitored using Google Analytics, providing insights into traffic, user behavior, and engagement. These insights are visualized through Looker Studio, offering dynamic, interactive reports and dashboards that assist in real-time decision-making. The combination of these tools helps optimize the website's user experience, improve content strategies, and support data-driven growth.

Key Components:

1. Google Analytics Integration

Google Analytics is the backbone for collecting and analyzing web traffic data in this project. Its features include:

- **User Behavior Tracking:** Analytics collects and reports on how users interact with the website, such as which pages they visit, how long they stay, and how they navigate through the site. It helps to identify the most engaging content.
- **Demographic and Interest Data:** This data provides insights into user demographics (age, gender, location) and interest categories, helping tailor the content to the target audience.
- **Traffic Sources:** Google Analytics distinguishes between traffic sources—whether users come from organic search, direct visits, social media, or referral links. This allows marketers to adjust their strategies for better targeting.
- **Real-Time Monitoring:** It enables real-time tracking of website visitors, showing active users, their locations, and the pages they are viewing. This feature is valuable for live campaigns or content releases.

2. Looker Studio Reports

Looker Studio is utilized for advanced data reporting and visualization. Its capabilities include:

- **Dynamic Data Visualization:** Looker Studio transforms raw data from Google Analytics into interactive reports featuring charts, graphs, and tables. This makes complex data easy to interpret and share with stakeholders.
- **Custom Dashboards:** Customizable dashboards display key metrics, such as total sessions, user engagement, conversion rates, and user acquisition trends, allowing a detailed view of website performance.

- **Real-Time Reporting:** By connecting to Google Analytics, Looker Studio ensures that reports are updated in real time, reducing manual report generation efforts.
- **Sharing and Collaboration:** Reports can be easily shared with team members or stakeholders, allowing for collaborative decision-making based on data insights.

3. WordPress-Hosted Website

The project's front-end is built using **WordPress**, a popular content management system (CMS) known for its flexibility, ease of use, and scalability. WordPress was selected to host the website for several reasons:

- **Customizable Design and Layout:** WordPress offers a wide range of themes and plugins that allow for quick customization of the site's appearance and functionality, ensuring a user-friendly experience.
- **SEO Optimization:** WordPress is SEO-friendly, which helps improve search engine rankings and drives more organic traffic to the website. Integrating SEO plugins helps optimize content and site structure.
- **Plugin Ecosystem:** WordPress's extensive plugin ecosystem allows seamless integration of third-party tools, including Google Analytics and Looker Studio, enabling efficient data collection and analysis without needing to write custom code.
- **Responsive and Mobile-Friendly Design:** The website is designed to be fully responsive, ensuring that it performs well across all devices, including desktops, tablets, and smartphones.
- **Content Management and Updates:** WordPress provides an intuitive interface for managing and updating content without requiring in-depth coding knowledge. This makes it easy to manage blog posts, media, and other content types.

Objectives:

The main objectives of this project include:

- **Website Performance Tracking:** Use Google Analytics to monitor and analyze traffic, bounce rates, session duration, and conversion metrics to understand website performance.
- **Data-Driven Insights:** Utilize Looker Studio to create detailed reports that present key performance indicators (KPIs) such as user flow, conversions, and demographic analysis.

- **Improvement of User Experience:** Use the insights generated to improve user engagement, enhance navigation, and optimize content to better serve the website's target audience.

Technologies Used

- **Google Analytics:** For tracking web traffic and user behavior data.
- **Looker Studio:** For visualizing data and generating reports from Google Analytics.
- **WordPress:** For website creation, hosting, and content management.
- **HTML, CSS, JavaScript:** For customizing the appearance and functionality of the WordPress site.
- **WordPress Plugins:** To extend the functionality of the site, such as integrating Google Analytics and improving SEO performance.

Technical Workflow

- **WordPress Website Setup:** The website was created and hosted using WordPress, providing a flexible content management system. A responsive theme was selected and customized using HTML, CSS, and JavaScript to ensure optimal user experience across all devices.
- **Google Analytics Setup:** Google Analytics tracking code was embedded into the WordPress site, allowing for data collection on user activity, traffic sources, and session metrics. Custom goals were defined to track specific user actions such as form submissions or product purchases.
- **Looker Studio Integration:** Using the data gathered from Google Analytics, dynamic dashboards and reports were built in Looker Studio. These dashboards provide visual insights into key metrics like user flow, bounce rates, conversion rates, and geographic distribution of visitors. The reports can be customized and shared with stakeholders for real-time decision-making.
- **Report Automation:** The connection between Google Analytics and Looker Studio ensures that reports update automatically, providing the most current data at all times.

Output

Steps 1: Create account at google Analytics

 Analytics conversions have been renamed **key events**. Key events measure the interactions most important to your business. They show up in the Advertising, Reports and Explore sections of Analytics. [Dismiss](#) [Learn more about key events](#)

 Analytics   

1 **Account creation** 2 Property creation 3 Business details 4 Business objectives 5 Data collection

Create an account

Create an Analytics account to collect and organise data. Accounts can access multiple data sources, using one or more measurement IDs.

Account details

Account name (Required)
Accounts can contain more than one measurement ID.

Google Analytics is a business tool. Use it exclusively for purposes related to your trade, business, craft or profession.

Step 2: Paste your Website Link and Stream Name

Analytics | All accounts: 3 | Data Driven | Set up data stream

Set up your web stream

Website URL: Stream name:

Enhanced measurement: ☒ Automatically measure interactions and content on your sites in addition to standard page view measurement. Data from on-page elements such as links and embedded videos may be collected with relevant events. You must ensure that no personally-identifiable information will be sent to Google. [Learn more](#)

Measuring: ☒ Page views ☒ Scrolls ☒ Outbound clicks + 3 more

Create stream

Step 3: Google Analytics will Generate Stream ID and Measurement ID

Web stream details

✓ Data collection is active in the past 48 hours.

STREAM NAME	STREAM URL	STREAM ID
shreyabhattacharjee	https://dev-shreya13.pantheonsite.io	9245503180

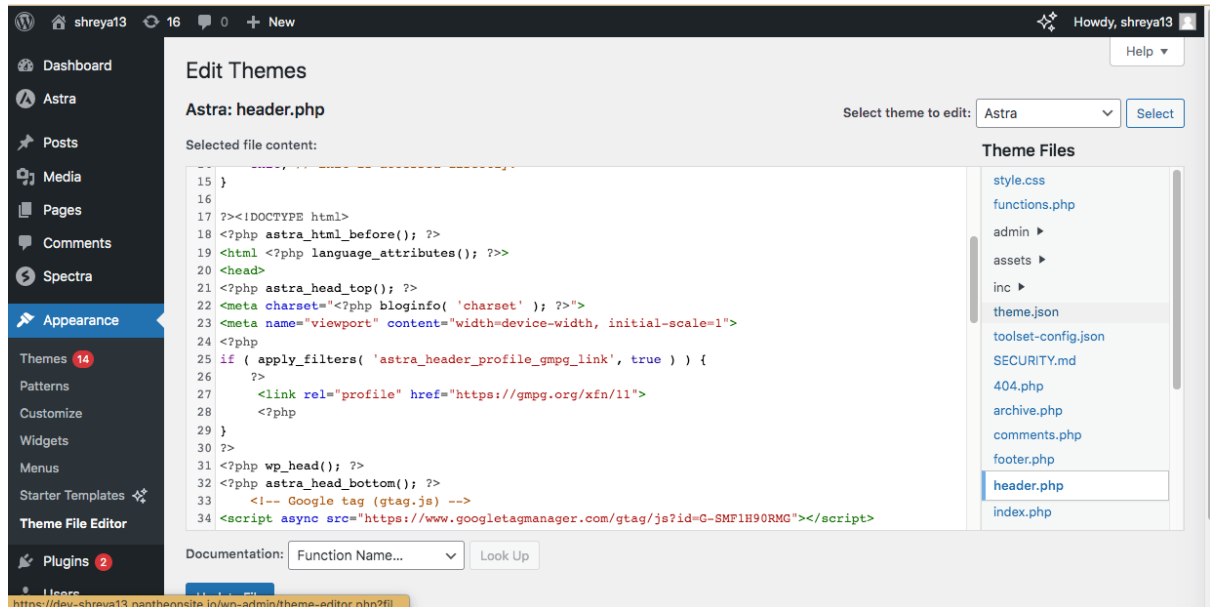

MEASUREMENT ID: G-SMF1H90RMG

Consent settings

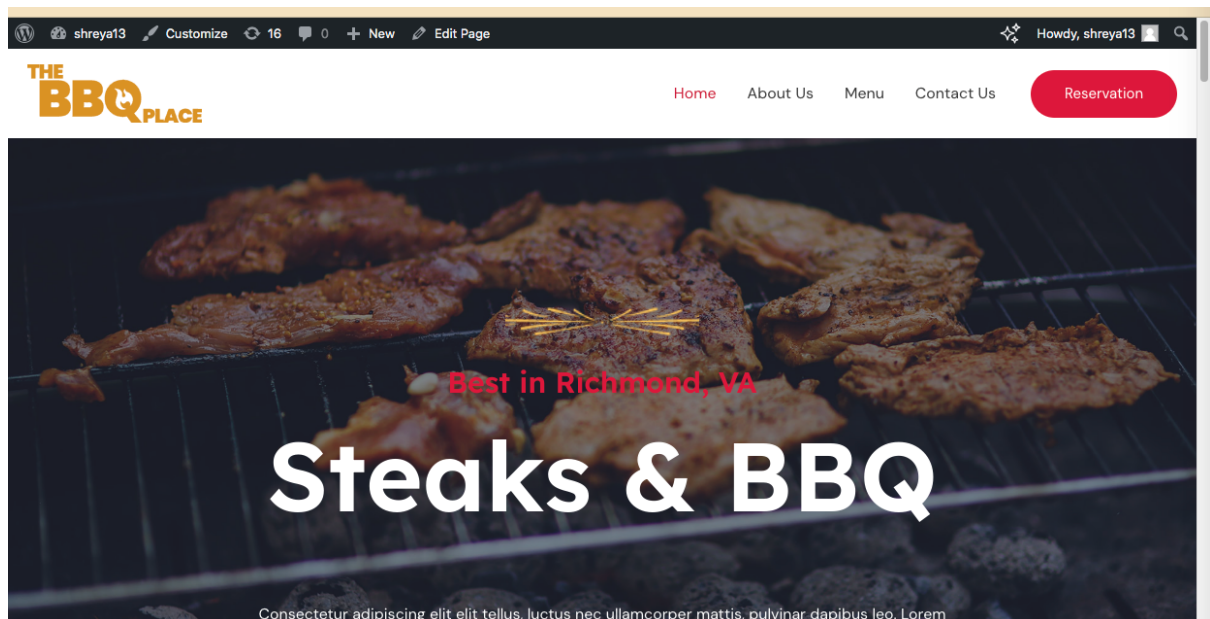

Events

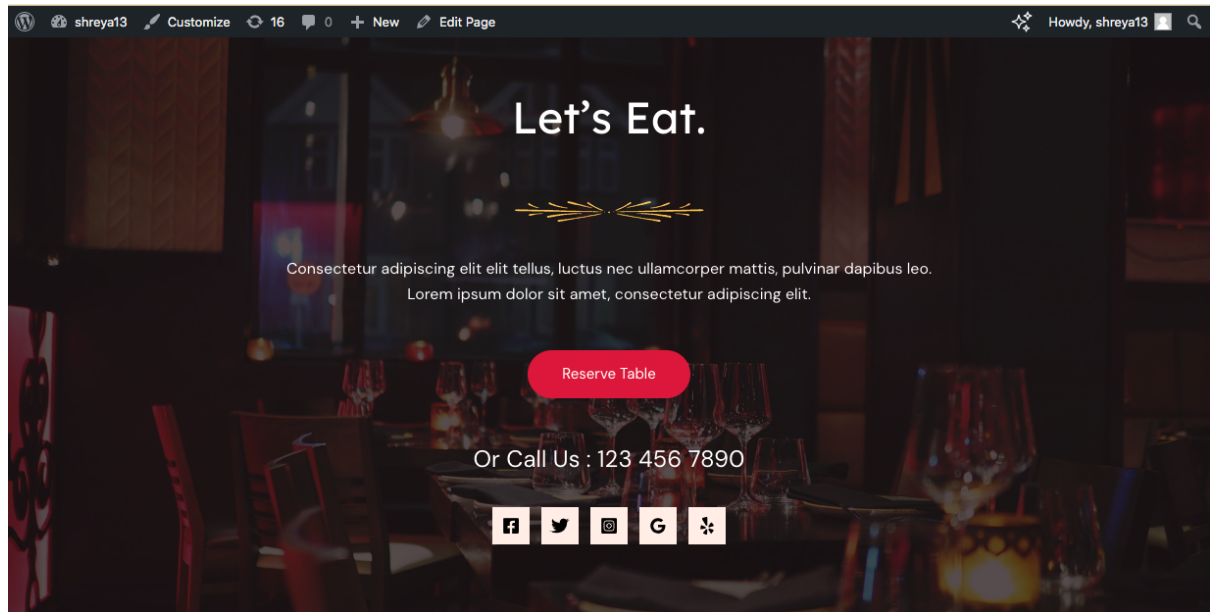

Enhanced measurement: ☒ Automatically measure interactions and content on your sites in addition to standard page view measurement.

Step 4: Code will Generated paste that code on your website backend (I have use wordpress to create website)

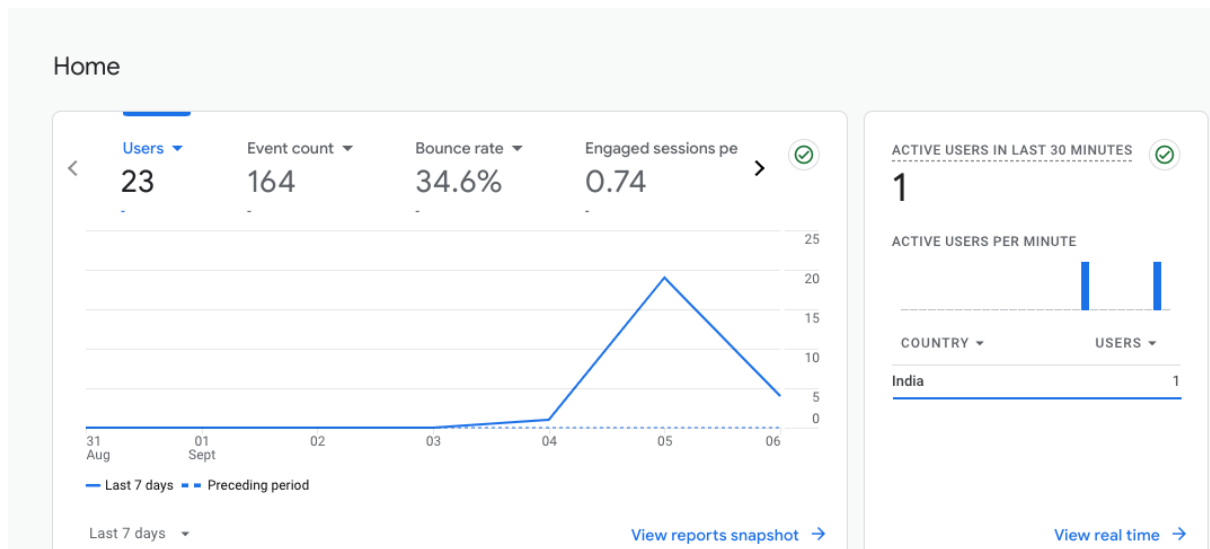

Step 5: check website

Step 6: Now you can see your website is link with Google Analytics

<https://analytics.google.com/analytics/web/?authuser=0#/p457173085/report/s/intelligenthome>

User activity over time

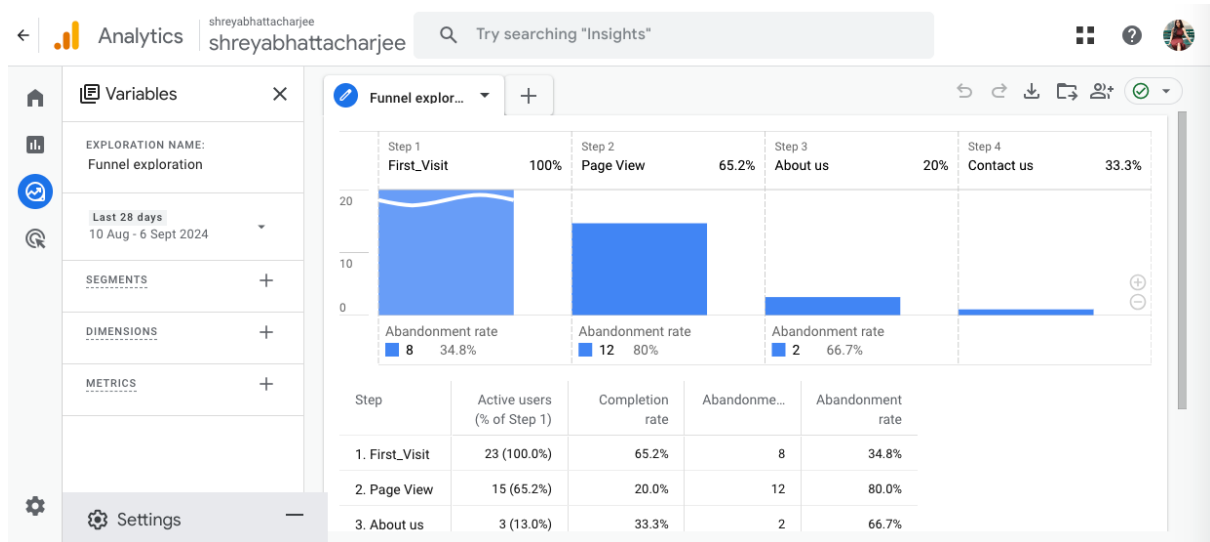

Step 7: Explore I have done Landing Page Report , Funnel exploration and Path exploration

a) Landing Page Report

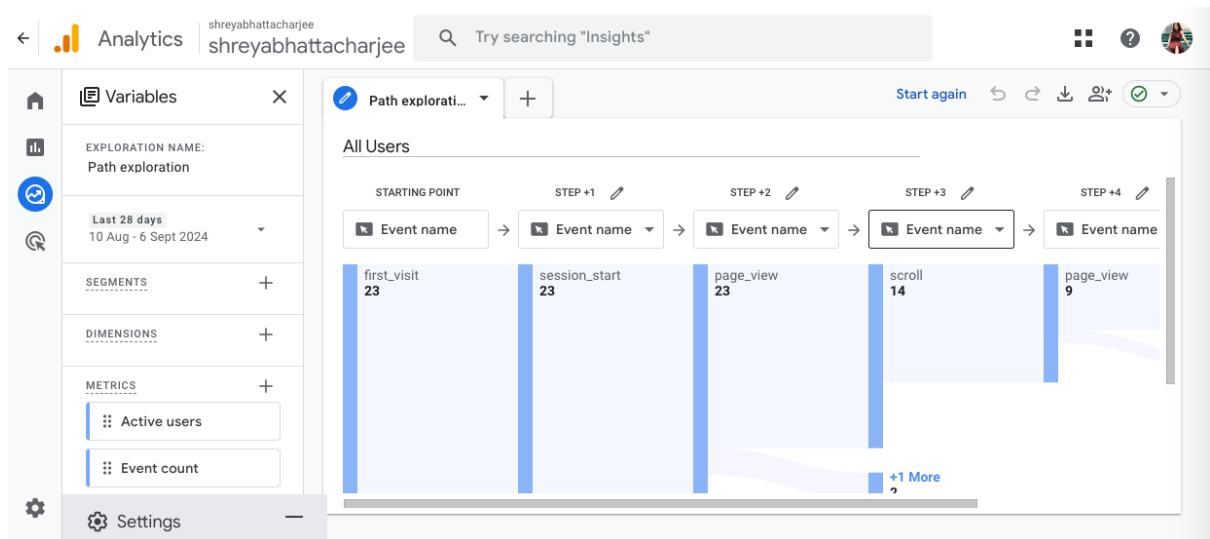

A screenshot of a Google Analytics 'Landing Page Report'. The report shows a table with columns: Page path + query string, Sessions, Engagement rate, and Bounce rate. The data is as follows:

Page path + query string	Sessions	Engagement rate	Bounce rate
Totals	26	65.4%	34.6%
1 /about-us/	16	81.3%	18.8%
2 /menu/	16	75.0%	25.0%
3 /contact-us/	8	87.5%	12.5%
4 /	2	50.0%	50.0%

b) Funnel exploration

c) Path exploration

Step 8: Now in Looker Studio I have linked my website with Google Analytics

Looker Studio

Search Looker Studio

Step 9: Create Dashboard <https://lookerstudio.google.com/s/jwOtUfkqZro>

Use Cases:

- **Website Owners:** To monitor traffic and user engagement, and optimize content and marketing strategies.
- **Data Analysts:** To create in-depth reports and analyze user behavior and website performance trends.
- **Marketers:** To track campaign effectiveness by analyzing traffic sources, user flow, and conversion rates.
- **Developers and Designers:** To optimize the site structure and layout based on real-time data and improve overall user experience.

Conclusion:

This project successfully demonstrates the integration of **Google Analytics**, **Looker Studio**, and **WordPress** to create a comprehensive web performance analytics platform. The use of WordPress as a flexible content management system, combined with Google Analytics and Looker Studio for data tracking and visualization, provides a powerful tool for website owners and stakeholders to make data-driven decisions that enhance user experience and business outcomes.
